

Why Searchlight?

A Technical Advantage:
USPs from our Development
Team.....

“open source
technology stack”

Searchlight is built on an open source
technology stack, which eliminates third party
licensing costs.

“Single Page Application (SPA)”

The Searchlight user interface is a Single Page Application (SPA) which "feels" a bit like a desktop application, while being accessed like any website.

“hosted in AWS data centres”

Searchlight is hosted in AWS data centres, which can be selected for each client to keep them close to your staff.

“completely segregated
from all other installations”

Your installation of Searchlight is completely segregated from all other installations, meaning that you cannot be affected by load or other issues affecting other clients.

“implemented via an API”

All Searchlight operations are implemented via an API, which allows integration with other systems, including analytics, CRM, accounting and banking.

“The coding architecture...
in operation since 2017”

The coding architecture of Searchlight has been in operation since 2017, managing hundreds of properties across thousands of acres. It is a tested and proven solution.

“scale to support hundreds of users and thousands of properties”

Searchlight can scale to support hundreds of users and thousands of properties on a single instance.

“bank feed integrations”

Searchlight has existing bank feed integrations with 30 UK banks, and counting.

“access to a development team”

Searchlight users have access to a development team of software engineers who built the software from scratch.

“does not require any
specific accounting package
to function”

Searchlight does not require any specific accounting package or other software to function - it works at 100% capacity in isolation.
